- ▶ Integrated citation export

Do you want to give your users the best of everything? More articles and eBooks, more opportunities for discovery? In short, the total library experience in one place? Encore with EBSCO Discovery Service (EDS) lets you do it all!

## INNOVATIVE AND EBSCO PARTNERSHIP BENEFITS LIBRARIES AND PATRONS

Innovative Interfaces and EBSCO have partnered to add a new and exciting option for discovery that benefits libraries and enhances value for their users. Encore partnered with EDS brings users the most comprehensive collection of full-text articles (and eBooks!) available. EDS is the largest, most encompassing single index of the world's literature, with tens of thousands of participating publishers and other partner resources. The robust metadata offered by EDS is culled from thousands of major journal publishers and information providers, providing the deepest possible indexing for the majority of journals and magazines. What's more, your library users will benefit from more full-text resources than any other option today.

## USER EXPERIENCE

A single result set from Encore with EDS integrates articles with results from your library. Users discover all types of appropriate content on the very first page, informed by local collections of all types and valuable metadata added by local catalogers. Users are presented with a single, unified set of facets, including EDS source-types that let users filter to academic journals alongside books or government publications.

From the first results page, users can place holds, see 100% real-time circulation status, and see which items they checked out or have on hold. They can place articles or books in a virtual Bookcart, or create bibliographies with citation software such as EndNote®, RefWorks™, or Zotero. What's more, users can share their results on Facebook and other social Web sites.
